Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mouse CXC chemokine receptor binding to PBSF/SDF-1 pre-B cell stimulatory factor - is useful for screening of potential HIV infection and AIDS inhibitors.

Claim 1; Page 54-56; 76pp; Japanese.

The present sequence represents a murine CXC chemokine receptor which binds to the mouse CXC chemokine pre-B cell stimulatory factor PBSF/SDF-I. The nucleic acid is isolated from mouse pre-B cell line DW34. The receptor and cells expressing it can be used in the study and mapping of the mechanism of HIV infection and in screening of potential inhibitors of HIV infection and the development of AIDS

Sequence 359 AA;

Query Match

Length 359; DB 2; 100.0%; Score 1867;

This sequence is the mouse CXCR4 protein. The invention relates to remedies inhibiting neovascularisation, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a substance capable of potentiating CXCR4. Based on a finding that vascularisation is inhibited in a CXCR4 knockout mouse, it becomes possible to prepare remedies inhibiting vascularisation which contain as the active ingredient a substance capable of potentiating CXCR4, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation ö 180 VILVMGYQKKIRSMTDKYRLHLSVADLLFVITLPFWAVDAMADWYFGKFLCKAVHIIYTV 120 240 QGDISQGDDRYICDRLYPDSLWMVVFQFQHIWVGLILPGIVILSCYCIIISKLSHSKGHQ 240 KRKALKITVILILAFFACHLPYYVGISIDSFILLGVIKQGCDFBSIVHKMISITBALAFF 300 VILVMGYOKKIRSMTDKYRLHLSVADLLFVITLPFWAVDAMADWYFGKFLCKAVHIIYTV 120 NLYSSVLILAFISLDRYLAIVHATNSQRPRKLLAEKAVYVGVWIPALLLTTPDFIFADVS 180 KRKALKTTVILILAFFACWLPYYVGISIDSFILLGVIKQGCDFESIVHKWISITEALAFF 300 9 9 HCCLNPILYAFLGAKFKSSAQHALNSMSRGSSLKILSKGKRGGHSSVSTESESSSFHSS 359 HCCLNPILYAFLGAKFKSSAQHALNSMSRGSSLKILSKGKRGGHSSVSTESESSSFHSS 359 MEPISVSIYTSDNYSEEVGSGDYDSNKEPCFRDENVHFNRIFLPIIFLIFLTGIVGNGL NLYSSVLILAFISLDRYLAIVHATNSQRPRKLLAEKAVYVGVWIPALLLTIPDFIFADVS MEPISVSIYISDNYSEEVGSGDYDSNKEPCFRDENVHFNRIFLYTIYFIIFLTGIVGNGL QGDISQGDDRYICDRLYPDSLWMVVFQFQHIMVGLILPGIVILSCYCIIISKLSHSKGHQ Gaps CXCR4; mouse; neovascularisation; inhibitor; solid cancer; therapy; tissue repairing agent; vascularisation. .. 0 inhibiting Indels CXCR4-potentiating agents and methods useful for neovascularization, and treating solid cancers. and tissue repairing agents containing as the active ingredient a substance capable of potentiating CXCR4. It is also possible to establish methods for treatment with the use of these remedies

Sequence 359 AA

883333

Length 359;

The invention discloses a composition comprising two or more isolated rate or human polymucleotides or a polymucleotide which represents a fragment, derivative or allelic variation of the mucleic acid sequence. Also claimed are a vector comprising the movel polymucleotide, a host cell comprising the vector, a method for identifying a mucleotide sequence which is differentially regulated in an animal subjected to pain and a fit to perform the method, an array, a method for identifying an agent that increases or decrease the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polymucleotides, a method for identifying a pharmaceutical composition, a cutyity in an animal of one or more of the polympetides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more of the polymetides or their antibodies. The polymucleotide or the compound that compound that regulates its activity is useful for preparing a medicament for treating compliance its activity is useful for preparing a medicament for treating the composition comprising the one or more of the sequence date for this patent did not form part of the printed the sequence date for this patent did not form part of the printed composition, preparesed during pain. Note: the sequence date for this patent did not form dart of the printed composition, but was obtained in electronic form directly from WIPO at the proposition, the sequence date for this patent did not form part of the printed composition.

29-JAN-2004 (first entry) ADE63145;

Rat Protein 008565, SEQ ID NO 9080.

Rat; pain; neuronal tissue; gene therapy; spinal segmental nerve injury; chronic constriction injury; CCI; spared nerve injury; SNI; Chung.

Rattus norvegicus.

The invention discloses a composition comprising two or more isolated rate or human polymucleotides or a polymucleotide which represents a fragment, or human polymucleotides or a polymucleotide which represents a fragment, comprising the vector comprising the novel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the composition, a method for producing a pharmaceutical composition or mark of for identifying a compound or small molecule that regulates the activity of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating copylypeptides or their antibodies. The polymucleotide or the compound that copylypeptides or their antibodies. The polymucleotide or the compound that injury (CCI) and spared nerve injury (SNI) in an animal (e.g. spin etherspy). The sequence presented is a rat protein (shown in Table 2 of the regetification) but was obtained in electronic form directly from WIPO at Edp. wipo.int/pub/published\_pot\_sequence. New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal. 5; Gaps Costigan M; Claim 1; Page; 1017pp; English. ```
Antibodies directed against the interleukin-8 receptor B can be used to treat or prevent inflammation e.g. psoriasis, dermatitis, rheumatoid arthritis and particularly inflammatory bowel disease and chronic lung inflammation. When immobilised, these antibodies may be used to detect interleukin-8 receptor B expression in cells and tissues and for affinity publification of interleukin-8 receptor B from cells. This sequence is an additional chemokine superfamily receptor which was identified by probing lamda libraries of genomic DNA from a human monocyte-like cell line (L-60) and human peripheral blood lymphocytes using a large fragment of the interleukin-8 type A receptor DNA (see AAQ99006). (Updated on 25-MAR-2003 to correct PP field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Interleukin, IL-8; inflammation; psoriasis; dermatitis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2 PF4AR members were identified by probing lambda libraries from human monoclyte-like cell line HL-60 and human peripheral blood lymphocytes using a large fragment of IL-8 receptor DNA (full sequence given in AAQ80520). The nucleotide sequences of the 2 PF4ARs are given in AAQ80521 and AAQ80522, and their respective amino acid sequences in AAR68812 and AAR68813. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               185
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     65
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               63
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Treatment of inflammatory disorders - by administering an antibody capable of binding a platelet factor 4 superfamily receptor polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              4 ISIYTSDNYTEEMGSGDYDSMKEPCFREENANFNKIFLPTIYSIIFLTGIVGNGLVILVM

This sequence is the human CXCR4 protein. The invention relates to remedies inhibiting neovascularisation, remedies for solid cancer, tremedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a substance capable of potentiating CXCR4. Based on a finding that vascularisation is inhibited in a CXCR4 knockout mouse, it becomes possible to prepare remedies inhibiting vascularisation which contain as the active ingredient a substance capable of potentiating CXCR4, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a substance capable of potentiating CXCR4. It is also possible to establish methods for treatment with the use of these remedies
                                                                                                                                                 178

This sequence represents CXC-chemokine receptor-4 (CXCR-4). Chemokine receptors play an important role in the chemotaxis of T-cells and receptors play an important role in the chemotaxis of T-cells and phagocytic cells to areas of inflammation. CXCR-4 is a member of the G-protein-coupled receptor family, which is involved in signal compared factor-1 (SpP-1, AAY52508). CXCR-4 also mediates CD4-independent infection by HIV-1. CXCR-4 has now been found to have a role in the aberrant proliferative behaviour of a number of cell types, including numerous primary tumnous behaviour of a number of cell types, including numerous primary tumnous compared in several brain tumour derived cell lines and compared cell lines. CXCR-4 is involved in cell transformation and derived cell lines and compared in several brain tumour derived cell lines and compared in the continuous proliferation of glioblastoma cancer. CC primary brain tumour tissues, breast tumour tissues, colorectal adenocarcinoma, lung carcinoma and melanoma cell lines. CXCR-4 expression cells, and inhibition of its gene function resulted in growth arrest. Comparesely, overgression resulted in enhanced and rapid cellular confidential complementary to at least a portion of an RNA transcript of a CXCR-4 gene can be used to inhibit hyperproliferation of an RNA transcript of a CXCR-4 gene can be used to inhibit hyperproliferation of an RNA transcript of preventing a disease or disorder; prostate cancer and so premalignant conditions, benign tumours, and also premalignant conditions, benign tumours, con also be used for treating e.g., cirthosis of the liver, keloid for preventing or treating e.g., cirthosis of the liver, keloid for preventing or treating acquition where cell proliferation, proriated and seese or disorder involving a desicency in cell proliferation, proriated and seese included egenerative disorders (e.g., those caused to hypertrophy, and shoulds that promote CXCR-4 function can also be used for treating e.g. cirthosial trauma, less on the solution of t

Treating or preventing reduced bone mass, e.g. osteoporosis, by reducing the level of neuropeptide Y activity in blood or cerebrospinal fluid. Human, neuropeptide Y; NPY; bone disease; bone mass; gene therapy; cerebrospinal fluid; CSF; inositol phosphate; IP; Paget's disease; fracture; extracellular signal-regulated kinase; ERK; osteoporosis; osteopena, bone metastasis; neurotransmitter; osteogenic; Human neuropeptide Y (NPY) Y3 receptor. (BAYU ) BAYLOR COLLEGE MEDICINE (AMLI/) AMLING M. 20-JAN-2000; 2000US-00489872. 22-JAN-2001; 2001WO-US002040. (first entry) Amling M, Karsenty G, WPI; 2001-488709/53. N-PSDB; AAD12801. WO200153477-A1. Homo sapiens 26-JUL-2001. 16-OCT-2001 

The present invention relates to a method for treatment or prevention of bone diseases characterised by loss of bone mass, comprises administering to a mammal a compound that lowers the level of neuropeptide Y (NPY) in the serum or cerebrospinal fluid (CSF) or a compound that lowers the level of inositol phosphate (IP) or extracellular signal-regulated kinase (HERK). The method is specifically used to treat (including by gene therapy) or prevent osteoporosis, osteopenia or Paget's disease, but may also be used e.g., in cases of fractures or bone metastases. These diseases may also be diagnosed by detecting elevated NPY levels, including monitoring of treatment, assessing efficacy of compounds in clinical trials and for identifying subjects at risk. The present sequence is a human NPY 31 receptor Example 7; Page 85; 102pp; English.

The specification describes an antibody which is specific for an antigenic fragment of gp120. This antigenic fragment binds to DC-SIGN or is exposed upon gp120 binding of DC-SIGN due to concomitant conformational change. DC-SIGN is a receptor that is specifically expressed on dendritic cells and facilitates infection of T lymphocytes with HIV. DC-SIGN is identical to a HIV-1 gp120-binding C-type lectin. DC-SIGN binds ICAM-3 (which is expressed constitutively on T lymphocytes) with high affinity. The antibody of the invention inhibits the trans enhancement of HIV entry into a T cell or macrophage facilitated by dendritic cells. The antibody is useful to treat or prevent HIV infection. The present sequence represents a human CXCR4 procein, which is a translocation promoting agent that interacts with CD4. This receptor functions in HIV-1 entry into cells 239 KTTVILILAFFACWLPYYIGISIDSFILLEIIKQGCEFENTVHKWISITEALAFFHCCLN 298 An antibody for the treatment or prevention of HIV-infection comprises a gpl20 portion which binds to DC-SIGN or is exposed upon gpl20 binding of DC-SIGN due to concomitant conformational change. 306 PILVAFLGAKFKSSAQHALNSMSRGSSLKILSKGKRGGHSSVSTESESSSFHSS 359

This invention describes a novel diagnostic agent (A) comprising at least two different ligands (I) for receptors (II) that are implicated in disease. (A) are used for the diagnosis of tumors (especially colorectal or prostatic), organ rejection, inflammation and autoimmune diseases. Also inhibitors of (I) are used therapeutically against tumors (and their metastases), inflammation (particularly bronchial asthma or chronic bowel inflammation), or autoimmune diseases (rheumatoid arthritis or lupus), where the (cardio) vascular, lymphatic, respiratory, nervous, digestive, endocrine, motor or urogenital systems or skin are affected, and bone on the products of the invention are chemokine derivatives which have cytostatic, antificammatory, antiasthmatic, immunosuppressive, dermatological, antirheumator, antiarthritic. Chemokines act on specific tumor and inflammatory calls through a constellation of these cells. Add80128 represent human chemokine fragments used to illustrate the method of the invention Diagnostic agent containing two or more receptor-specific ligands, useful for detecting tumors, inflammation etc., also therapeutic use of ligand inhibitors. The invention relates to a method of identifying Cysteine-X-Cysteine chemokine receptor 4 (CXCR4) binding compounds. The method comprises testing and selecting compounds in a library for their ability to bind to compare the convenent and biological activities (hemoatrractant cytokines) regulate the movement and biological activities of leukocytes in many disease situations. CXCR4 acts as a co-receptor for human immunodeficiency virus (HIV), as it interacts with the HIV envelope glycoproteins and the cellular CD4 ceceptor, to facilitate HIV entry into cells. The HIV glycoproteins (C receptor, to facilitate HIV entry into cells. The HIV glycoproteins consequently cleaved into gpl20 and gp41. Gpl20 binds to CXCR4 and the CD4 receptor present on the surface of susceptible CD4+ target cells, causing the virus to fuse with the cell membranes and thereby facilitating entry of the virus into the cell The eventual expression of the ciuse with uninfected CD4+ cells in membranes and thereby compounds of the invention inhibit the entry of HIV intection compounds of the invention inhibit the entry of HIV intection and the treatment and prevention of inhibit the entry of HIV infection and the treatment and prevention of acquired immunodeficiency syndrome (AIDS). The present sequence represents the human CXCR4 protein used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying agents that bind to CXC chemokine receptor 4, useful for treatment and prevention of acquired immunodeficiency syndrome, comprises screening compound library for members that bind to the receptor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a method (M1) for identifying a binding compound for cysteine.X-cysteine chemokine receptor 4 (CXCR4) comprises binding a molecule from the library of two or more molecules to the molecule with a binding property corresponding to CXCR4. (M1) comprises:

(a) providing a library of two or more molecules; (b) providing a molecule with a binding property corresponding to CXCR4, (d) binding a molecule from the library of two or more molecules to the molecule with binding property or more molecules to the molecule with a binding to CXCR4; (d) separating the bound molecule as a binding compound for CXCR4. Also described is a binding compound (1) for CXCR4 identified from M1. (1) has virucide and

anti-HIV activities. A partially purified CXCR4 protein is useful for carrying out selection, identification and improvement of tight binding ligands in identifying therapeutically useful compounds. Therapeutic peptides, peptidomimetics, or small molecule antagonists or agonists of CXCR4 binding may be used in the prevention and treatment of AIDS and HIV infection. The present sequence represents human CXCR4 which is given in an example from the present invention
                                                                                                                                                                                                                                                                                                                         125

Human CXCR4 protein.

us-09-36/-052-2.rag

Inducing chemotaxis of endothelial cells, useful for regulating angiogenesis, e.g. for treating cancer, comprises treatment with stromal cell-derived factor 1 alpha.

Claim 3; Fig 1; 26pp; English.

The invention describes a method of inducing chemotaxis of endothelial cells by treatment with stronal cell-derived factor lalpha (GDF1a). The method is used for stimulating celemetaxis, and thus angiogenesis, and stroke and is used for treating atherosclerosis, restenosis, ischaemic stroke and spinal cord injury. Inhibitchion of this process is useful in treatment and prevention of a very wide range of diseases, such as infection (by bacteria, fungi, protozoa or viruses such as human immunodeficiency virus (HIV) and adquired immunodeficiency syndrome (AIDS), pain, cancer and benign prostatic hypertrophy, diabetes, obesity, anorexia, bulimia, asthma, Parkinson's disease, acute heart failure, hypotension, hypotension, uninary retention, osteoprosis, anginal pectoris, myocardial infarction, stroke, ulcers, benign prostatic hypertrophy, migraine, vomiting, psychotic and neurological disorders (e.g. anxiety, schizophrenia) and dsykinesias (e.g. Huntingdon's disease), inflammatory disease, rheumatorid arthritis, diabetic retinopathy, inflammatory disease, atherosclerosis, restenosis, Alzheimer's disease, congestive heart failure, cardiac remodeling, angiogenic disease, solid tumours, ceceptor 4 (CXCR4) polynucleotide

The present invention relates to a new method for inducing chemotaxis of endothelial cells (EC). The method of the invention involves treatment with a stromal cell-derived factor is (SPFIalpha). The method is used for stimulating EC chemotaxis, and thus angiogenesis, and is used for treating atherosclerosis, restenosis, ischaemic stroke and spinal cord injury, while inhibition of this process is useful in treatment and prevention of a very wide range of diseases, e.g. infection (by bacteria, tungi, protozoa or viruses), pain, cancer and benign prostatic hypertrophy, diabetes, obesity, anorexia, bulimia, asthma, allergies, parkinson's disease, acute heart failure, hypotension, hyperension, contrary retention, osteoporosis, angina pectoris, mycardial infarction, troke, ulcers, migraine, vomiting, psychotic and neurological disorders and dyskinesias, inflammatory disorders, rheumatoid arthritis, diabetic retinopathy, inflammatory disorders, rheumatoid arthritis, diabetic retinopathy, inflammatory bowel disease, atherosclerosis, restenosis, angiogenic diseases, solid tumours, and Kaposi sarcoma. The present amino condition and sequence represents the human CXCR4 protein of the invention unemotaxis; endothelial cell; EC; angiogenesis; atherosclerosis; restenosis; ischaemic stroke; spinal cord injury; infection; bacteria; dimusi; protozoa; virus; pain; cancer; benign prostatic hypertrophy; diabetes; obesity; ancrexia; bulimia; asthma; allergy; hypertension; Parkinson's disease; acute heart failure; hypocension; urinary refention; osteoporosis; angina pectoris; myocardial infarction; stroke; dyskinesia; migraine; vomiting; psychotic disorder; neurological disorder; ulcer; inflammatory disorder; rheumatoid arthritis; diabetic retinopathy; inflammatory bowel disease; atherosclerosis; restenosis; Kaposi sarcoma; Alzheimer's disease; congestive heart failure; cardiac remodelling; anglogenic disease; solid tumour; human; stromal cell derived factor-la; SDF-lalpha; CXCR4. Inducing chemotaxis of endothelial cells, useful for regulating angiogenesis, e.g. for treating cancer, comprises treatment with stromal cell-derived factor 1 alpha. Patent No. 5892017

GENERAL INFORMATION:

APPLICANT: Lee, James

TITLE OF INVENTION:

NUCLBIC ACID ENCODING PF4A RECEPTOR

TITLE OF SEQUENCES: 6

CORRESPONDENCE ADDRESS:

ADDRESSEE: Genentech, Inc.

SITRET: South San Bruno Blvd

CITY: South San Francisco

STATE: Callifornia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ZIP: 94080
COMPUTER READABLE FORM:
MEDIUM TYPE: 3.5 inch, 1.44 Mb floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SOFTWARE: WinPatin (Genentech)
CURRENY APPLICATION DATA:
PEDLICATION NUMBER: US/08/802,627A
FILING DATE: 19-Feb-1997
PELICATION NUMBER: 07/810782
